

Southwest Environmental Limited

Geotechnical and Environmental Consultants

Phase 1: Desktop Study

A Phase 1 Desktop Study is often required by local planning authorities, when applying for planning permission. New build and change of use both require planning and therefore a Phase 1 Desktop Study may need to be compiled.

Phase 2: Geotechnical or Environmental Investigation

You may have need for geotechnical or environmental ground data, by using traditional sampling methods, such as trial pitting, shell and auger drilling in softer soils, and rotary / pedant systems in hard soils / rock, Southwest Environmental can provide the data that you need.

Reporting can be factual, or interpretative.

Phase 3: Remediation / Monitoring

Using Techniques such as Bio piles for hydrocarbon contamination SWEL, can ensure that your site can be brought within acceptable limits of contamination.

Monitoring may required to observe for settlement, ground water fluctuations and gassing issues.

Restoration Quality Assurance (RQA):

RQA - Restoration Quality Assurance is the monitoring, supervision and documentation of works occurring at Land Fill Sites or Void Restoration Projects

Void Restoration RQA aims to ensure that the restored land is fit for the intended purpose whether for commercial or residential development.
